

Overview

➤ Multiple reference images + Point-tracks → Composed video

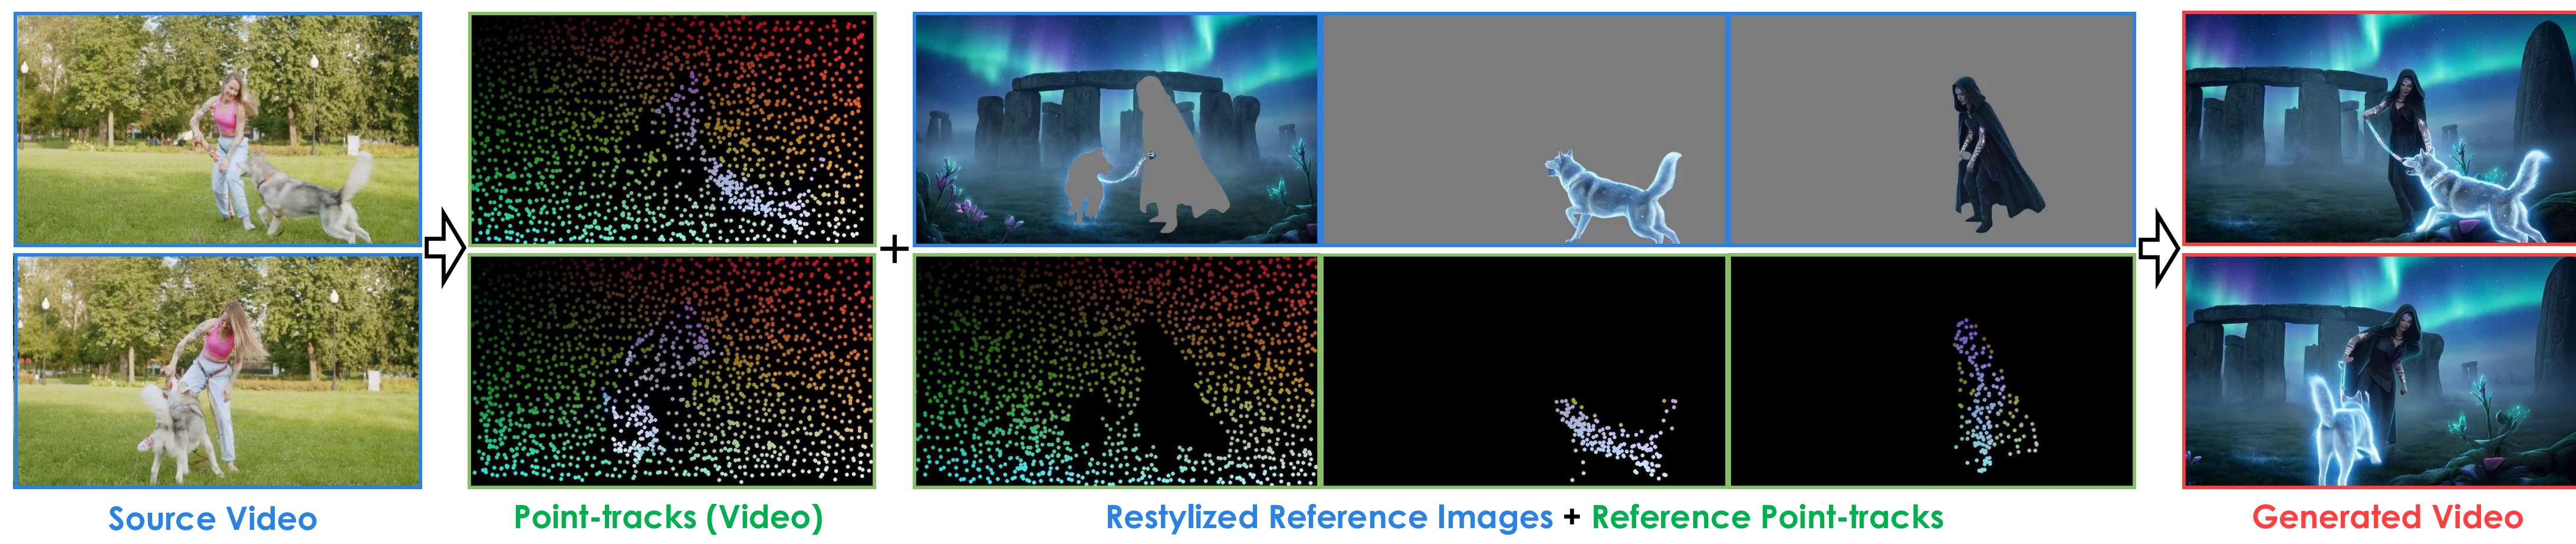

Pipeline

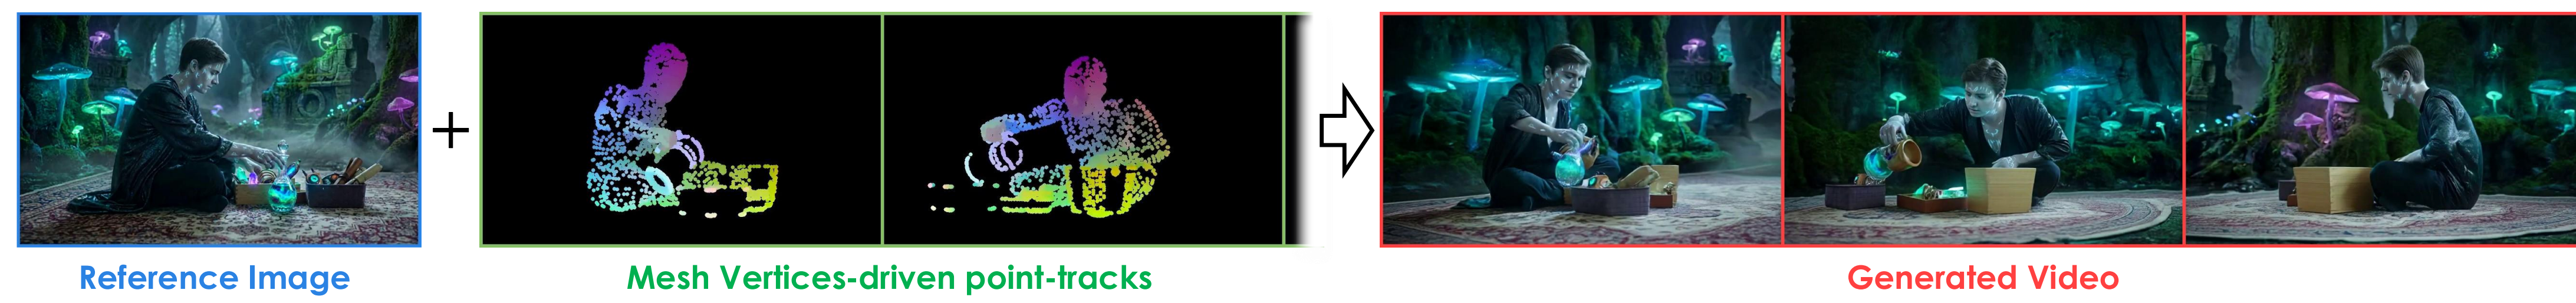

Qualitative Results

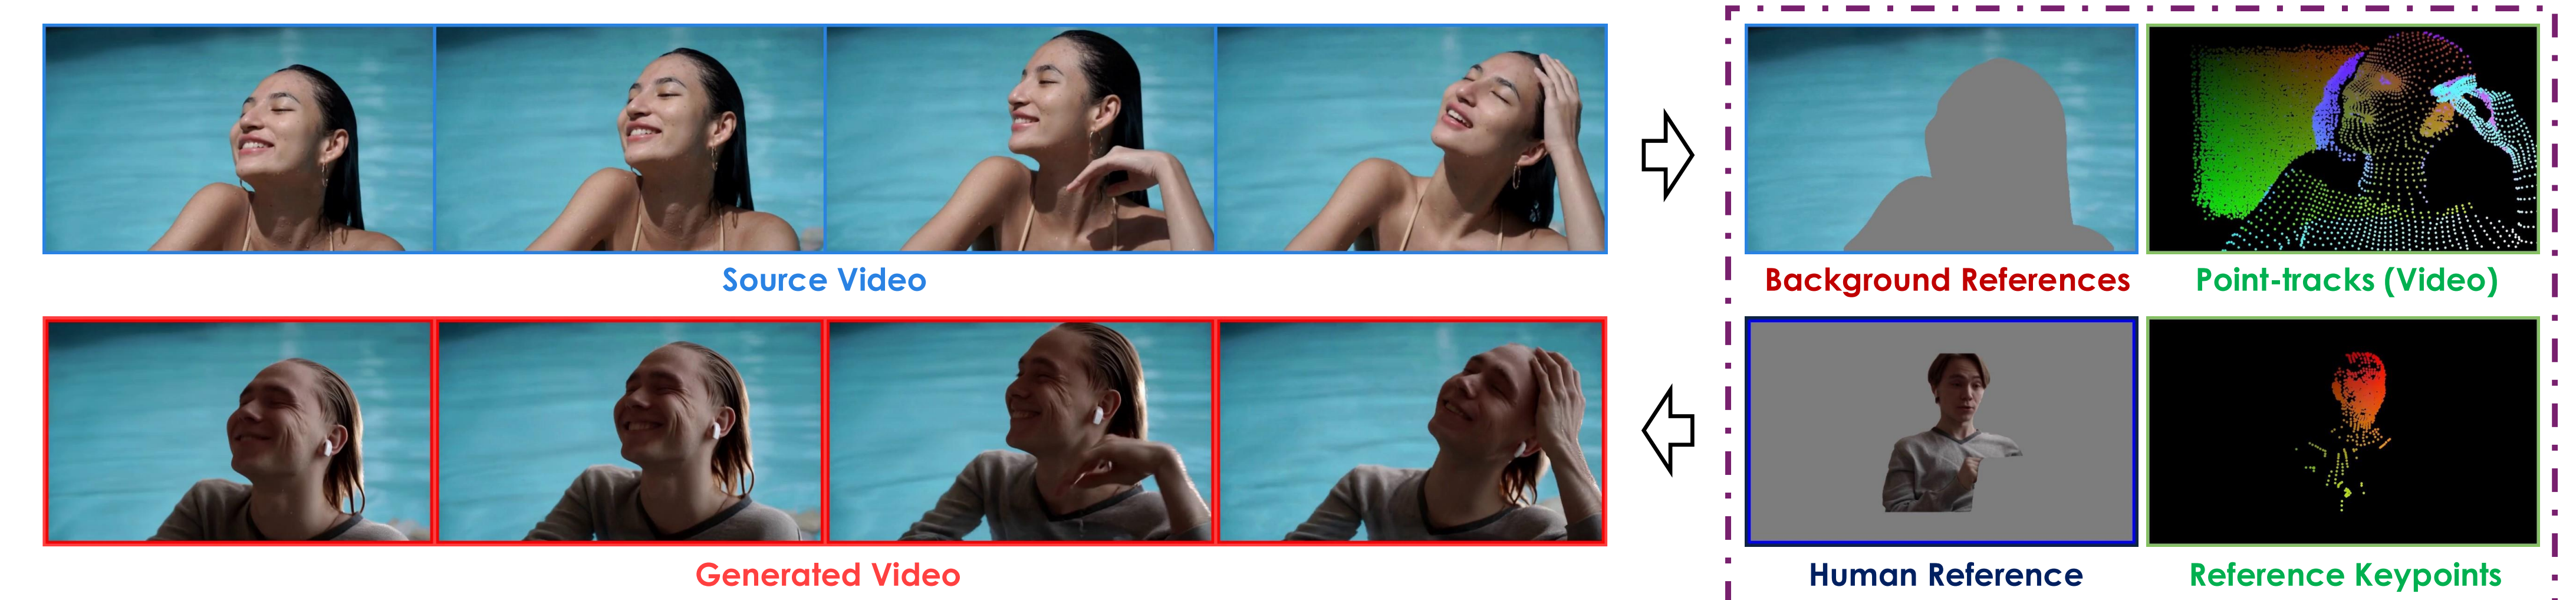

Multi-reference-driven Video Restylization

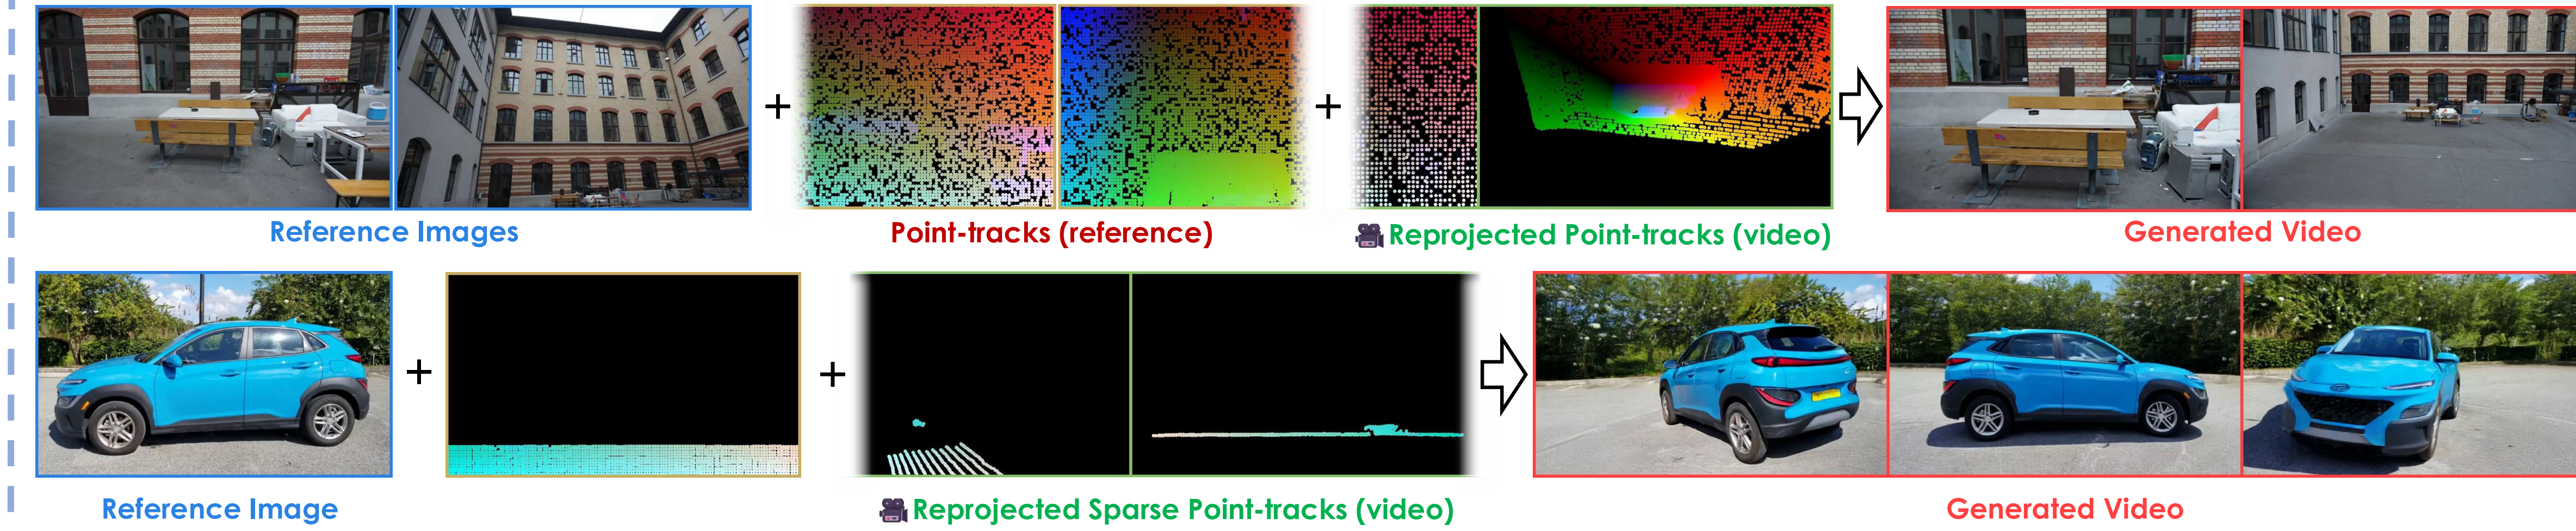

Mesh-driven Compositing

Keypoint-driven Compositing

Camera Motion Control in Static Scene

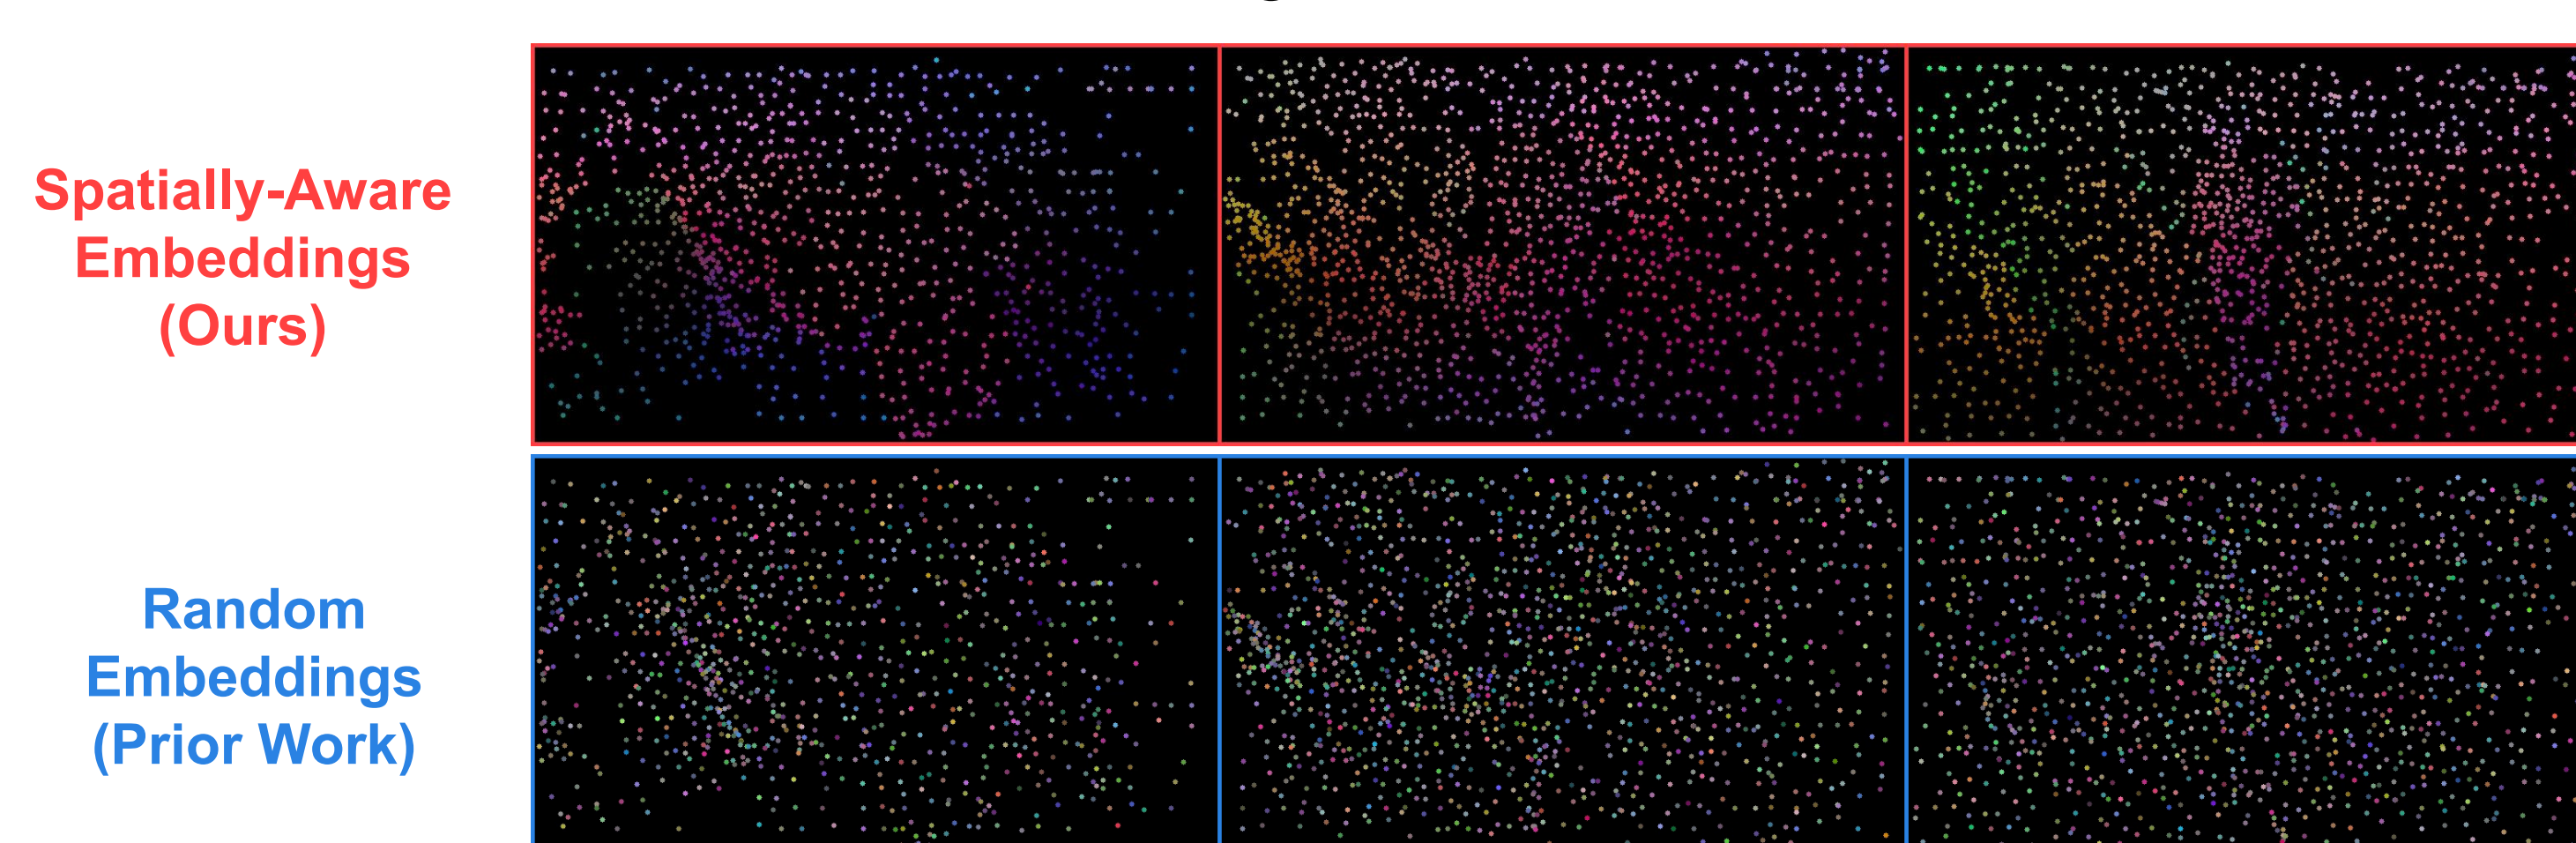

Camera Retargeting in Dynamic Scene

Ablation Study: Point-track Embeddings

Embedding Visualizations

Generated Video Frames

- Encodes the full sequence of point-track coordinates into an embedding.
- Ensures spatially close point-tracks exhibit similar embedding representations.
- Facilitates the model to associate points between the reference and generated frames despite being spatiotemporally discontinuous.
